Subpage

ML(Machine Learning)

Machine learning (ML) is an umbrella term for solving problems for which development of algorithms by human programmers would be cost-prohibitive, and instead the problems are solved by helping machines "discover" their "own" algorithms, without needing to be explicitly told what to do by any human-developed algorithms. Recently, generative artificial neural networks have been able to surpass results of many previous approaches. Machine-learning approaches have been applied to large language models, computer vision, speech recognition, email filtering, agriculture and medicine, where it is too costly to develop algorithms to perform the needed tasks.

Usage

- **She had a yonderly look in her eyes as if she were lost in thought and unaware of her surroundings.**
- *During the lecture, I noticed him becoming increasingly yonderly, gazing out the window instead of paying attention to the professor.*
- As the sun set over the tranquil countryside, he sat on the porch swing, appearing yonderly, lost in the beauty of the horizon and the memories it invoked.

Synonyms and Antonyms

Synonyms	Antonyms
Dreamy	Alert
Absent-minded	Focused

Definition: "Yonderly" is an adjective that describes a state of being **mentally or emotionally distant**, absent-minded, or preoccupied with one's thoughts. It often implies a sense of daydreaming or being lost in one's own world.
